Docket Clerk P.O. Drawer 800889 Dallas, TX 75380				KINKEAD, ARNOLD M
		ART UNIT	PAPER NUMBER	2817

DATE MAILED: 12/23/2003

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>
	09/992,500	DVJ, RAVI KUMAR
	<b>Examiner</b>	<b>Art Unit</b>
	Arnold M Kinkead	2817

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on 08 October 2003.
- 2a) This action is **FINAL**.      2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 1-28 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) Claim(s) \_\_\_\_\_ is/are allowed.
- 6) Claim(s) 1, 10, 15 and 24 is/are rejected.
- 7) Claim(s) 2-9, 11-14, and 16-23 and 25-28 is/are objected to.
- 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on \_\_\_\_\_ is/are: a) accepted or b) objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. §§ 119 and 120

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
a) All b) Some \* c) None of:  
1. Certified copies of the priority documents have been received.  
2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 13) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application) since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.  
a) The translation of the foreign language provisional application has been received.
- 14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121 since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.

#### Attachment(s)

- 1) Notice of References Cited (PTO-892)      4) Interview Summary (PTO-413) Paper No(s) \_\_\_\_\_.  
2) Notice of Draftsperson's Patent Drawing Review (PTO-948)      5) Notice of Informal Patent Application (PTO-152)  
3) Information Disclosure Statement(s) (PTO-1449) Paper No(s) \_\_\_\_\_.      6) Other:

## DETAILED ACTION

### *Specification*

The examiner has withdrawn previous objections to the specification with regards the values for " W,V,J,U,T,Q,P,K, AND S" not being defined.

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Llewellyn(US 5,339,050).

The reference by Llewellyn discloses a PLL synthesizer(see figure 2 and col. 5, lines 15-31) which comprises a VCO(210) that receives a control voltage stored on loop filter(209); the vco generates an output clock signal( $F_{out}$ ) determined by the control voltage. A first frequency divider(206) divides the output clock signal to produce a first divided clock signal ( $F_{out}/M$ .)

A second frequency divider(202) is shown to divide a reference frequency  $F_{in}$  by a second divider value  $N$  to produce a second divided clock signal ( $F_{in}/N$ .)

A phase – frequency detector(207) is shown for comparing the first and second divided clock signals and generates an UP or DOWN control signal based on the comparison.

Art Unit: 2817

A charge pump (208) is shown receiving the UP/DOWN control signals to increase/decrease the frequency control voltage on the loop filter. A loop response circuit including DAC(220) and controller(not shown) allows for the Pump current to be adjusted as a function of the divider values(see col. 5, lines 15-31). Also, noted in col. 2, lines 47-65, M, for example, does have an operational range and thus the pump current must be adjusted as the loop goes through coarse tuning and fine tuning with the values for M changing to allow for the desired locking to occur and the current being adjusted according to the varying operational modes of the PLL and divider values within a range.

*Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 10,15 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Llewellyn(US 5,339,050 of record) and further in view of Davis et al (US 5,420,545).

The reference by Llewellyn discloses a PLL synthesizer(see figure 2 and col. 5, lines 15-31) which comprises a VCO(210) that receives a control voltage stored on loop filter(209); the vco generates an output clock signal( $F_{out}$ ) determined by the control voltage. A first frequency divider(206) divides the output clock signal to produce a first divided clock signal ( $F_{out}/M$ .)

Art Unit: 2817

A second frequency divider(202) is shown to divide a reference frequency Fin by a second divider value N to produce a second divided clock signal (Fin/N.)

A phase – frequency detector(207) is shown for comparing the first and second divided clock signals and generates an UP or DOWN control signal based on the comparison.

A charge pump (208) is shown receiving the UP/DOWN control signals to increase/decrease the frequency control voltage on the loop filter. A loop response circuit including DAC(220) and controller(not shown) allows for the Pump current to be adjusted as a function of the divider values(see col. 5, lines 15-31). Also, noted in col. 2, lines 47-65, M, for example, does have an operational range and thus the pump current must be adjusted as the loop goes through coarse tuning and fine tuning with the values for M changing to allow for the desired locking to occur and the current being adjusted according to the varying operational modes of the PLL and divider values within a range.

The reference does not show control of the resistance in the loop filter(claims 10, and 24) with the divider value changes, however, this is a conventional PLL LPFcontrol and will be highlighted in the Davis et al reference. The reference also does not describe an integrated circuit for the PLL and a processor operating at a plurality of clock speeds(claim 15). With regards the last two items, integration of these PLL circuits is common practice due to the advances and requirements made in the field. The integration of the PLL elements allow for a more compact package and easier process control as the elements can be fabricated with similar characteristics on each IC substrate. With regards a processor operating at a plurality of clock speeds, these PLL's are used in communication systems and networks and serve to synchronize processors either local or remote that operate with a number of clock signals; these are conventional and official notice is taken.

Art Unit: 2817

With regards the Davis et al reference, figures 1 and 2 disclose a PLL(10) which comprises a loop filter(see figure 2) whereby as noted in cols. 3-4, in fastlock mode the dividers are changed and also, the loop filter resistance is also changed as a consequence of the dividers being changed so as to allow for a quicker lock response.

In light of the above it would have been obvious for one of ordinary skill in the art at the time of the invention to realize that the PLL of Llewellyn could be implemented as integrated device, this allowing for a compact and more stable PLL circuit. The use of such circuits in networks with processors running at different clock speeds for synchronizing is conventional and official notice is taken here. The PLL allows for proper synchronization of such a processor(s). The Davis et al reference serves to highlight the fact that the loop filter is a factor when the divider values are changed to allow for quicker loop response and thus faster lock times, this in addition to pump current control would be part of the Llewellyn PLL to provide a more rapid synchronization which is desireable.

*Response to Arguments*

5. Applicant's arguments filed 10-08-03 have been fully considered but they are not persuasive. The examiner has considered arguments with regard the control of Ic based on the operational range for M/N, but as noted in the rejection, col. 2, lines 46-65 and col. 5, lines 15-31 does suggest the relationship.

*Conclusion*

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action.

Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and

Art Unit: 2817

the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

*Allowable Subject Matter*

7. Claims 2-9,11-14,16-23, and 25-28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

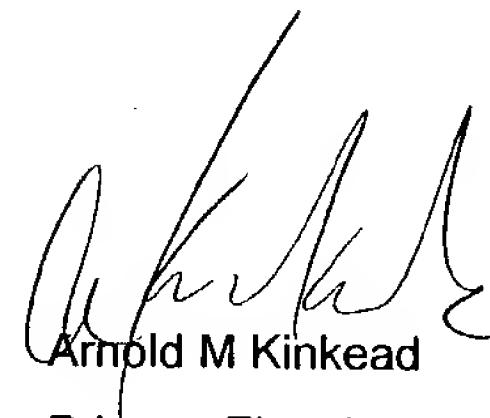

The examiner could not find fair suggestion in the prior art for the relationships between pump current levels and divider values,i.e., setting Ic to minimum and other current levels when N is in a range...or setting the resistance R based on the dividers being in a range....

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arnold M Kinkead whose telephone number is 703-305-3486. The examiner can normally be reached on Mon-Fri, 8:30 am -5 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Pascal can be reached on 703-308-4909. The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-7724 for regular communications and 703-308-7724 for After Final communications.

Art Unit: 2817

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed  
to the receptionist whose telephone number is 703-308-0956.

Arnold M Kinkead
